

# Bootstrap Formatting

[Home](#) > [Bootstrap](#) > Formatting

## Typography

---

All HTML headings, `<h1>` through `<h6>`, are available. `.h1` through `.h6` classes are also available, for when you want to match the font styling of a heading but still want your text to be displayed inline.

Create lighter, secondary text in any heading with a generic tag or the `.small` class.

```
<h1>h1. Bootstrap heading <small>Secondary text</small></h1>  
...  
<h6>h6. Bootstrap heading <small>Secondary text</small></h6>
```

markup

## Lead body copy

---

Make a paragraph stand out by adding `.lead`. `html <p class="lead">...</p>`

## Alignment classes

---

```
<p class="text-left">Left aligned text.</p>  
<p class="text-center">Center aligned text.</p>  
<p class="text-right">Right aligned text.</p>  
<p class="text-justify">Justified text.</p>  
<p class="text-nowrap">No wrap text.</p>
```

markup

## Transformation classes

---

```
<p class="text-lowercase">Lowercased text.</p>  
<p class="text-uppercase">Uppercased text.</p>  
<p class="text-capitalize">Capitalized text.</p>
```

markup

## Contextual colors

---

Convey meaning through color with a handful of emphasis utility classes. These may also be applied to links and will

darken on hover just like our default link styles.

markup

```
<p class="text-muted">...</p>
<p class="text-primary">...</p>
<p class="text-success">...</p>
<p class="text-info">...</p>
<p class="text-warning">...</p>
<p class="text-danger">...</p>
```

## Inline List

markup

```
<ul class="list-inline">
  <li>...</li>
</ul>
```

## Button

Use the button classes on an `<a>`, `<button>`, or `<input>` element. Bootstrap ensure they all looks alike with consistent styling.

markup

```
<a class="btn btn-default" href="#" role="button">Link</a>
<button class="btn btn-default" type="submit">Button</button>
<input class="btn btn-default" type="button" value="Input">
<input class="btn btn-default" type="submit" value="Submit">
```
